

Eshana

Eshana (Civil Engineering)

Team Role: Liaison Between Client and Team

Primary responsibilities:

- Set up meetings with client and team
- Communication between team and client
- Organizing materials sent by client and made by team

Professional Role: UX Research & Systems Thinking Lead

Why this fits: Civil engineering is fundamentally about systems, constraints, and human interaction with infrastructure—perfect for user journeys and lifecycle thinking.

Primary responsibilities

- Lead **user research & persona development** (Weeks 1–4)
- Translate abstract “life stage” concepts into **structured user journeys**
- Own **problem framing**: pain points, constraints, tradeoffs
- Ensure prototypes reflect **realistic flows**, not just features

Key deliverables

- Assist with user journey maps (onboarding → discovery → engagement)
- Research synthesis used to justify design decisions

Tarika

Tarika (Computer Science)

Team Role: Product Manager

Primary responsibilities:

- Keep an active notion organizing tasks for the team
- Coordinate across UX, engineering, and business roles to keep the team aligned on deliverables and timelines

Professional Role: Product & AI Experience Lead

Why this fits: You sit at the intersection of technical feasibility, human-centered design, and narrative clarity—exactly what this project needs.

Primary responsibilities

- Define **what the AI actually does** (inputs, outputs, boundaries)
- Own **semantic modeling of user intent** (goals, behaviors, life stage signals)
- Translate research → **AI interaction concepts**
- Help shape **explainability & trust** in the AI experience
- Collaborate with and help front end and back end engineers

Key deliverables

- AI system concept (how personalization works beyond market basket analysis)
- Prompt/interaction flows for onboarding & discovery
- Product narrative for final demo & report

Satyam

Satyam (Computer Engineering)

Role: Backend & AI Systems Engineer

Why this fits: CE background is ideal for making the AI real—not just conceptual.

Primary responsibilities

- Design and implement **backend logic**
- Handle:
 - Data structures for user profiles
 - Semantic matching / embeddings
 - API logic for the demo
- Ensure the system is **modular, explainable, and demo-ready**

Key deliverables

- Backend prototype (even if lightweight / mocked)
- AI pipeline documentation
- Support live demo reliability

Pranav

Pranav (Computer Engineering)

Role: Frontend & Integration Engineer

Why this fits: CE + systems thinking = clean implementation of UX ideas.

Primary responsibilities

- Build **frontend** for the chosen prototype
- Integrate backend responses into the UI
- Ensure:
 - Smooth flows
 - Clear AI feedback to users
 - Usable demo experience

Key deliverables

- Functional frontend connected to backend
- Demo-ready UI
- Technical walkthrough for client

John

John (Finance / Business)

Team Role: Recorder

Primary responsibilities:

- Transcribe team meetings and upload the transcript to Github
- Take notes to share with team after meetings

Professional Role: Business Strategy & Client Value Lead

Why this fits: This project must clearly answer “*Why does Synchrony care?*”—that’s John’s lane.

Primary responsibilities

- **Business framing & value proposition**
- Map:
 - Personas → Synchrony products
 - AI insights → strategic impact
- Lead **competitive analysis** and market comparison
- Help frame findings for **executive audiences**

Key deliverables

- Competitive landscape analysis
- Product-market fit narrative
- Business impact section of final report & presentation

Tools

Product Manager:

- Notion - to organize team tasks

Recorder:

- Teams Transcribe - for meeting notes

Liaison:

- Teams - for setting up calendar invites and communication

AI Tools:

- Claude - for coding (front end and back end)
- Figma - for prototyping
- Gemini and ChatGPT Plus - brainstorming
